TickTick

Task manager

The screenshot displays the TickTick task manager interface. On the left, a sidebar contains navigation options: 'Today' (6 tasks), 'Next 7 Days' (10 tasks), 'Calendar', 'Inbox' (2 tasks), 'Lists', 'Tags', 'Custom', 'Personnel', 'BearStudio' (10 tasks), 'Add List', and 'Completed'. The main area shows the 'Today' view with a search bar and a list of tasks under the 'Low Priority' filter. The tasks are:

- Définir date pour (11h45) réunion confs intéressantes 13:00
- Faire une passe sur la doc de génération iOS & android interne kwik Today
- Builder la nouvelle version de kwik sur iOS kwik Today
- Faire fonctionner Ayni sur IE11 ayni Today
- Faire les tests kwik kwik Today
- Voir testflight (solution de test iOS) bearstudio kwik Today

On the right, a panel displays the text: "Click on the task title to view details".

Split view

Hot reload config

Lot's of plugins

The screenshot shows a terminal window with a split view. The top pane displays the output of the `ll` command in a directory `~/Documents/dev/perso/website`. The output lists files and directories with their permissions, owners, sizes, and timestamps. The bottom pane shows the `vtop` dashboard, which includes a CPU usage graph, a memory usage graph, and a list of running processes. The terminal also shows the output of the `yarn start` command, indicating that the application has been compiled successfully.

Files: Auto Save

Contrôle la sauvegarde automatique de fichiers dont l'intégrité est compromise. Découvrez plus en détail la sauvegarde automatique [ici] (https://code.visualstudio.com/docs/editor/codebasics#_save-auto-save).

onFocusChange

Files: Auto Save Delay

Contrôle le délai en ms au bout duquel un fichier à l'intégrité compromise est enregistré automatiquement. S'applique uniquement quand 'files.autoSave' a la valeur 'afterDelay'.

1000

Editor: Font Size

Contrôle la taille de police en pixels.

17

Editor: Font Family

Contrôle la famille de polices.

Monaco, Menlo, 'Courier New', monospace

Editor: Tab Size

Le nombre d'espaces auxquels une tabulation est égale. Ce paramètre est substitué basé sur le contenu du fichier lorsque **Editor: Detect Indentation** est à 'on'.

Need to Test API Endpoints? Two Quick Ways to Do It.

Author
Chris Coyier

Comments
Start the Conversation →

Here's a possibility! Perhaps you are testing your JavaScript with a framework like [Jasmine](#). That's nice because you can write lots of tests to cover your application, get a nice little UI to see the output, and even integrate it with build and deploy tools to make your ongoing development work safer.

Now, perhaps there is this zany developer on your team who keeps changing API endpoints on you — quite literally breaking things in the process. You decide ... [Read article](#)

Frontend Focus

<https://frontendfoc.us/>

The image shows three examples of HTML5 form input types: Telephone, Email, and Number. Each input field is accompanied by a 'Go' button. Below the input fields are three virtual keyboards: a telephone keypad with international dialing options (iPhone +4477, home +44 117 9), a standard QWERTY keyboard, and a numeric keypad with symbols like #, *, and @.

HTML5's Input Types: Where Are They Now? — HTML5

introduced 13 new types of form input (think things like `type="color"`), adding significantly to the number of different fields we could add to our forms. But what

Merci ! 😄
